

Brent Toderian

Brent Toderian is a nationally and internationally respected practitioner and thought-leader with 25 years of experience in advanced urbanism, city planning, transportation and urban design. In recent years he has advised and collaborated with cities, agencies and best-practice developers around the world, including the cities of Auckland, Brisbane, Buenos Aires, Groningen, Helsinki, Medellin, Oslo, Perth, Rotterdam, and Sydney, as well as many Canadian cities.

Brent's establishment of TODERIAN UrbanWORKS (TUW) in early 2012 followed 6 years of significant achievement as Vancouver BC's Chief Planner (2006-2012), with accomplishments that included the 2010 Winter Olympics-related planning and design; the EcoDensity and Greenest City Initiatives;

new visions and strategies for the city's viaducts, multi-modal mobility and active transportation (walk, bike and transit); place-making, public place design and street activation strategies; next generation transit-oriented development (TOD) initiatives; and inventive strategies at the downtown, city and regional levels emphasizing a complete multi-modal city, not just a livable one. Brent also oversaw all development, design and architecture in Vancouver, known internationally as a "city by design."

Brent was Manager of Centre City Planning + Design, and Chief Subdivision + Neighbourhood Planner in Calgary, Canada (2001-2006), where he pioneered innovative approaches to planning, policy and design in the downtown, inner city and suburbs. His Calgary work included the creation and leading of the award-winning Centre City Plan, and real progress toward more integrated, connected new neighbourhood models in all contexts. Before that, Brent was an award-winning Ontario-based city planning, design and development consultant (1992-2001), with projects from Toronto to Yellowknife.

Brent's current consulting work with TUW is extremely diverse, including "out-of-the-box" change-making involving civic and organizational culture; improved community conversations; inspirational and educational speaking and workshops; teaching; writing; and creative media (social and mainstream). His transportation work including advising councils and chief transportation officials on next generation mobility and the integration of land-use and transportation.

A passionate practitioner and advocate for creative, vibrant and holistic city-building, Brent is the founding President of the Council for Canadian Urbanism (CanU), Canada's only regular radio columnist on "City-Making" with CBC Radio, a member of ULI BC's Advisory Board and many other bodies related to cities, and a regular writer with the Huffington Post, Planetizen, CityLab and SPACING. He is a highly sought-after international speaker, teacher and collaborator on issues of advanced urbanism.
