

Bring Road Safety Audit Training to Your District

ITE Learning Hub

DISTRICT LIAISON OPPORTUNITY

A practical, two-day ITE course that builds local capability and turns local roadways into a hands-on learning lab.

ITE's Road Safety Audit (RSA) Fundamentals Training Course equips participants to do more than understand the RSA process. They apply it within the community, conduct an in-service field audit, develop findings and recommendations, and present their work as a team.

APPLIED PROJECTS

1

ITE CERTIFICATE

DAY 1

LEARN + APPLY

Purpose and types of RSAs; the eight-step U.S. process; RSAs within a Safe System; pedestrian, bicyclist, and motorcyclist considerations; and a team-based design-stage RSA.

DAY 2

OBSERVE + RECOMMEND

A field visit for an in-service RSA; team analysis of safety issues; development of findings and recommendations; presentations; instructor feedback grounded in FHWA guidance and practical experience.

Your role as a District Liaison: help identify potential hosts and connect interested leaders with ITE

"It was a great course overall. The presenters made it fun and collaborative, and so did the attendees."

— RSA Fundamentals Participant

 A Community of
Transportation Professionals

Why Bring It to Your Region?

BUILD WORKFORCE CAPABILITY.

Participants leave with practical skills they can use to plan, conduct, and support RSAs in their own communities.

CREATE LOCAL VALUE.

The class works with local projects and roadways, connecting the learning directly to conditions in the host region.

STRENGTHEN PARTNERSHIPS.

The course brings engineers, planners, safety professionals, consultants, and agency staff together around a shared safety process.

ADVANCE THE SAFE SYSTEM APPROACH.

Participants examine how roadway design, operations, and surrounding land use influence kinetic-energy risk and identify proactive countermeasures to prevent deaths and serious injuries.

"Overall, the training was well organized, informative, and relevant to practical roadway safety work. It strengthened my understanding of the RSA process and provided useful guidance that I can apply to future projects."

— RSA Fundamentals Participant

A Shared Hosting Model

ITE PROVIDES

Experienced instructors, course content, participant materials, the ITE Learning Hub platform, and the ITE RSA Training Program Certificate.

THE LOCAL HOST SUPPORTS

A suitable venue and logistics, local outreach, and coordination with ITE to identify appropriate roadway sites, local project information, and available data.

STATE RECOGNITION EXAMPLE

Michigan DOT accepts the ITE RSA Fundamentals course in place of NHI 380069 for its consultant RSA training requirement. ITE welcomes conversations with other DOTs about how the course may align with their requirements.

How District Liaisons Can Help

1

SHARE

Share the opportunity with District and Section leaders and include it in safety, professional development, and annual meeting discussions.

2

IDENTIFY

Identify public agencies, universities, consultants, or companies that may be interested in hosting or partnering on a regional course.

3

CONNECT

Connect interested leaders with ITE so we can discuss timing, enrollment, a local venue, and potential RSA sites.

Know a potential host? Connect them with ITE.

If a District, Section, agency, university, consultant, or other partner may be interested in hosting an RSA Fundamentals course, contact ITE Professional Development or visit the RSA Fundamentals course page.
