

### ITETripGen Web App Description

The ITETripGen web app is a tool that enables the user to create data plots and associated statistics that demonstrate the relationship between an independent variable and measured trip generation. The analyst selects a specific land use type, its setting, an independent variable, the type of trip (person or vehicle), and the time period. The app enables the analyst to filter the data based on geographic location, age of data, and size of independent variable. The data that populate the web app are from the latest edition of ITE *Trip Generation Manual*.

### ITEParkGen Web App Description

The ITEParkGen web app is a tool that enables the user to create data plots and associated statistics that demonstrate the relationship between an independent variable and measured parking demand. The analyst selects a specific land use type, its setting, an independent variable, and the time period. The app enables the analyst to filter the data based on geographic location, age of data, and size of independent variable. The data that populate the web app are from the latest edition of ITE *Parking Generation Manual*.
