Table of Contents

Foreword ................................................................................................................................. v
Acknowledgments ................................................................................................................... vii

CHAPTER 1: INTRODUCTION........................................................................................................ 1
R. Marshall Elizer Jr., P.E., PTOE, Transportation Services Manager,
Gresham, Smith and Partners
1.1 Purpose of Handbook ........................................................................................................ 1
1.2 Challenges in Urban Street Design .................................................................................. 2
1.3 Urban Street Design Perspectives .................................................................................... 3
1.4 History of Urban Street Development .............................................................................. 4
1.5 Evolution of Geometric Design Practices ....................................................................... 5
1.6 Design Considerations by Functional Classification ....................................................... 7
1.7 A Suggested Urban Street Functional Design Process ................................................... 10
1.8 Flexibility in Application of Design Criteria .................................................................. 14
1.9 Relationship to Other Design Guidance ......................................................................... 15
1.10 Handbook Organization and Structure ......................................................................... 16
Cited References ..................................................................................................................... 17

CHAPTER 2: DESIGN PHILOSOPHY AND CONTROLS ............................................................... 19
R. Marshall Elizer Jr., P.E., PTOE, Transportation Services Manager,
Gresham, Smith and Partners
2.1 Introduction ....................................................................................................................... 19
2.2 Design Controls and Criteria .......................................................................................... 30
2.3 Design Elements .............................................................................................................. 59
2.4 Cross-Section Elements .................................................................................................. 85
2.5 Other Considerations in Urban Street Design ................................................................ 106
Cited References ..................................................................................................................... 115
References for Further Reading ............................................................................................. 127

CHAPTER 3: ACCESS MANAGEMENT ...................................................................................... 129
Philip B. Demosthenes, Senior Planner, Parametrix Inc.
R. Marshall Elizer Jr., P.E., PTOE, Transportation Services Manager,
Gresham, Smith and Partners
3.1. Introduction ..................................................................................................................... 129
3.2. Benefits of Access Management .................................................................................. 132
3.3 Implementing Access Management ............................................................................... 135
3.4 Legal Issues in Access Management ............................................................................. 139
3.5 Access Location .............................................................................................................. 140
3.6 Access Spacing ............................................................................................................... 147
3.7 Access Design ............................................................................................................... 155
### CHAPTER 4: INTERSECTIONS

Kay Fitzpatrick, Ph.D., P.E., Research Engineer, Texas Transportation Institute

<table>
<thead>
<tr>
<th>Section</th>

CHAPTER 7: ARTERIAL STREETS ................................................................................................................. 303
Karen K. Dixon, Ph.D., P.E., Associate Professor, Oregon State University
  7.1 Introduction ........................................................................................................................................ 303
  7.2 Existing Guidelines ............................................................................................................................ 304
  7.3 Street Users and Right-of-Way Components .................................................................................. 304
  7.4 Alignment and Grade ......................................................................................................................... 314
  7.5 Cross-Section Elements .................................................................................................................. 319
Cited References ........................................................................................................................................ 333
References for Further Reading .................................................................................................................. 336

CHAPTER 8: ROADSIDE DESIGN .................................................................................................................. 337
Alan L. Childers, P.E., Vice President, Cannon & Cannon Inc.
  8.1 Introduction ........................................................................................................................................ 337
  8.2 Existing Guidelines ............................................................................................................................ 338
  8.3 Basic Concepts ................................................................................................................................. 339
  8.4 Design Options for Reducing the Hazard of Roadside Obstacles .................................................... 343
  8.5 Application of Design Options for Specific Roadside Obstacles .................................................... 350
  8.6 Other Safety-Related Issues ............................................................................................................ 357
Cited References ........................................................................................................................................ 359

CHAPTER 9: BUS AND RAIL TRANSIT ......................................................................................................... 363
Rodney W. Kelly, P.E., Vice President, Parsons
Duncan W. Allen, P.E., Principal Transportation Engineer, Parsons
Dave N. Carter, Assistant Director of Development Services,
  Transportation and Traffic, City of Richardson, TX, USA
  9.1 Transit Service on Urban Streets ....................................................................................................... 363
  9.2 Existing Guidelines ............................................................................................................................ 368
  9.3 Considerations for On-Street Buses ............................................................................................... 369
  9.4 Considerations for On-Street Light Rail and Streetcars ................................................................. 375
  9.5 Considerations for Off-Street Bus and Rail ..................................................................................... 379
Cited References ........................................................................................................................................ 382
References for Further Reading .................................................................................................................. 384

CHAPTER 10: DESIGN EXAMPLES .............................................................................................................. 385
R. Marshall Elizer Jr., P.E., PTOE, Transportation Services Manager,
  Gresham, Smith and Partners
Kevin G. Hooper, P.E., Principal, Kevin Hooper Associates
  10.1 Design Example 1: Intersection Sight Distance Calculations for Case B1 ....................................... 387
  10.2 Design Example 2: Accommodation of Design Vehicles at Intersections .................................... 389
  10.3 Design Example 3: Superelevation Design at an Intersection ....................................................... 391
  10.4 Design Example 4: Pedestrian Features Checklist ....................................................................... 394
  10.5 Design Example 5: Mid-Block Pedestrian Crossing on a Four-Lane Arterial ............................. 397

Table of Contents • vii
10.6 Design Example 6: Roadside Redesign in an Intersection Redevelopment Area ................................................................. 398
10.7 Design Example 7: Pedestrian and Bicyclist Accommodation at an Arterial Intersection ........................................................................................................ 400
10.8 Design Example 8: Fitting Bike Lanes into a Five-Lane Arterial................................................................. 403
10.9 Design Example 9: Traffic Control Devices for a Bicycle Lane through a Signalized Intersection ................................................................. 405
10.10 Design Example 10: Control of Access to Driveways Near an Arterial Intersection ................................................................................................. 406
10.11 Design Example 11: Design to Limit Weaving Between Intersections ................................................................................................. 408
10.12 Design Example 12: Realignment of Two Closely-Spaced Intersections ................................................................................................. 409
10.13 Design Example 13: Provision of a Left-Turn Lane................................................................................................. 411
10.14 Design Example 14: Offset Left-Turn Lanes................................................................................................. 413
10.15 Design Example 15: Corner Island Design ................................................................................................. 414
10.16 Design Example 16: Adding a Right-Turn Lane ................................................................................................. 417
10.17 Design Example 17: Planning a New Subdivision Street Network for All Users ................................................................................................. 419
10.18 Design Example 18: Redesign of a Suburban Collector Street ................................................................................................. 423
10.19 Design Example 19: Developing Standards for a New High-Speed Arterial Roadway ................................................................................................. 424
10.20 Design Example 20: Reallocation of Cross-Section on an Arterial ................................................................................................. 425
10.21 Design Example 21: Staged Roadway Design ................................................................................................. 428
10.23 Design Example 23: Traffic Signal Support Considerations ................................................................................................. 432
10.24 Design Example 24: Concrete-Top Drainage Catch Basins ................................................................................................. 434
10.25 Design Example 25: Large Tree at Pavement Edge ................................................................................................. 435
10.26 Design Example 26: Guardrail Along a High-Crash Horizontal Curve ................................................................................................. 437
10.27 Design Example 27: Utility Poles and Bridge Column on an Urban Arterial ................................................................................................. 438
10.28 Design Example 28: Addition of a Bus Bay on an Arterial ................................................................................................. 440
10.29 Design Example 29: Neighborhood Access Design for Light-Rail Transit ................................................................................................. 441
10.30 Design Example 30: Bus Queue-Jumper Lane Design in Mixed Traffic ................................................................................................. 444

Cited References ......................................................................................................................................................................................... 446
